Retrospective risk study: fixed stocks, different weights
1 sessions: observed mean and variability
Mean episode return (%)
Episode standard deviation (%)
1 sessions: preference changes the tradeoff
Certainty-equivalent return (%)
Relative risk aversion (gamma)
5 sessions: observed mean and variability
Mean episode return (%)
Episode standard deviation (%)
5 sessions: preference changes the tradeoff
Certainty-equivalent return (%)
Relative risk aversion (gamma)
19 sessions: observed mean and variability
Mean episode return (%)
Episode standard deviation (%)
19 sessions: preference changes the tradeoff
Certainty-equivalent return (%)
Relative risk aversion (gamma)
